*First reviewed by CNET in February 2005, we recently took another look at the Dell Inspiron 6000. The original configuration we reviewed sold for about \$1,700 back in February; in this review we take a look at a significantly less expensive \$972 configuration.*

*The Dell Inspiron 6000 is a midsize laptop with an entertainment slant. The design is quite similar to that found on a number of other Dell laptops, including the Inspiron 9300 and the XPS M140. The notebook is light silver with a white trim, and it measures about 1.5 inches thick, 14 inches across, and just less than 10.5 inches deep. The keyboard is firm and adequately responsive, and it's big enough to work on comfortably. Below the keyboard is a nice-size touch pad with two big mouse buttons. Our test unit weighed 6.6 pounds, or 7.5 pounds with the compact AC adapter--about average for a midsize and not quite light enough for comfortable travel. Overall, the case feels fairly sturdy, though the lid gives quite a bit when you push down on it. We like the silver media-control buttons that line the case's front edge. They're accessible even when the notebook's lid is closed, and you can use them to adjust the volume (or mute) and toggle through tracks on a CD or scenes on a DVD. Two stereo speakers also sit along the Inspiron 6000's front edge; they were louder and clearer than your average laptop speakers.*

## **Other Specifications**

Condition: Used/ Working

Accessories: Charger, bag, upgraded to 1Gb, Software pack, WiFi-ready. Battery excluded.

Bonus: Atech Webcam ( brand new, with box)

Payment: COD or via Banco de Oro or Western Union (when applicable)

Delivery: Meet up if within Metro Manila, Bulacan, Pampanga\*
